

Greip Complete: New customized field type – Automatically formed link

A new customized field type, Automatically formed link, has been added to Greip Complete service. In the Setup / Customize fields the Field type can be selected when customizing fields.

The Automatically formed link consists of steady URL basic part and variable end parameter. The URL Basic part is given in field customization and the field from which the end of the link is to be taken is predefined here as well (URL End parameters).

Example: The URL basic part is <https://patentscope.wipo.int/search/en/detail.jsf?docId=> and the end parameter is chosen to be the Publication number. On a case record the Publication number is [WO2016116658](#). The link on that case record is <https://patentscope.wipo.int/search/en/detail.jsf?docId=WO2016116658>.

Custom Field

Fields marked with an asterisk (*) are mandatory!

Field information	
Field name in English	Publication link *
Field name in Finnish (optional)	Linkki julkaisuun
Field name in Swedish (optional)	Länk till publikation
Field type	Automatically formed link *
